The *Real Estate Record* assessed the threat bluntly: “New York would undoubtedly lose a great deal in prestige the world over—and in actual dollars and cents, too—should Chicago or any other city on the continent count a larger population.” European banking and export firms might shift their American branches to the heartland; corporate headquarters would soon follow, taking professional firms along; the market prices of stocks and commodities would get set in the interior; manufacturing would steal away; New York’s property values would scud downward. Doomsayers recalled how the power and prestige of Philadelphia, once America’s chief city, had slowly bled away once it was surpassed numerically by its Hudson River rival.

If Chicago became the first city in population, moreover, it might relegate New York to secondary status in other spheres—those of arts, culture, and politics. This fear took tangible form in 1890, when Congress gave the midwesterners the go-ahead to host a giant celebration of the four hundredth anniversary of Columbus’s voyage. The idea of a World’s Fair had been broached back in 1882, and ever since the two colossi had been competing for it furiously. Defeat seemed another doleful indicator of metropolitan decline.

How to hold the front rank? Immigration was important but inconstant and slow. Green underscored the fact that Chicago, like Paris and London (which had obtained a regional government with establishment of the London County Council in 1888), had “become great and prosperous, not alone by accumulation of number, within their first restricted bounds, but by expansion, annexation, and consolidation”—and the city’s leading businessmen agreed.

GREEN’S DREAM OF NEW YORK

With the Chamber of Commerce opting for decisive measures, Andrew Haswell Green turned to the state legislature in 1890 and got it to establish a Greater New York Commission to examine the issue of consolidation. The new body quickly elected Green president and Stranahan vice-president, and in a series of addresses and memorials that year, Green proceeded to lay out, with great sweep and power, the arguments on its behalf.

Green began at the beginning, the prelapsarian age when the area's European settlers had lived in harmony with one another. The three islands they settled—Manhattan, Long, and Staten—remained “in close indissoluble relation” at the mouth of the great river, serving as common “buttresses and breakwaters of a capacious harbor.” Then came the Fall. Natural unity gave way to artificial divisions: states, cities, counties. Waterways became walls, as residents perversely turned them from “bonds of union” into “symbols of division.”

But it was absurd to treat rivers as barriers. Green pointed out that the chief cities of the world—London, Amsterdam, Prague, Vienna—were municipally and commercially unified by rivers. Paris alone boasted twenty-seven spanning bridges. Far more troubling was that under existing political arrangements, protection of the navigable water system—the concern of all—had become the duty of none. Fragmentation of authority led to pollution and subversion of the area's single greatest asset, even though all were affected equally by the decay. The tides marched through all the municipalities, collecting and distributing everywhere “offal and sewerage loaded with contagion,” and “exotic microbes, bacteria, and all variety of poisonous germic life” were not hemmed in by city boundaries.

Such harbor-level problems—garbage, smoke, stench, bad drainage, noxious manufactories—could not be attended to by municipalities in hostile array. In the absence of a supra-government that could make a corrective plan for the entire port, the area would continue to suffer from the depredations of a vast number of private “marauders, who by encroachment, appropriation and misuse, deplete the general system to transfuse its vitalities into some niggard scheme of individual profit.”

This situation was as unnecessary as it was ridiculous. Perhaps long ago, when it seemed there would not be enough commerce to go around, there might have been some sense in a hoarding of territorial advantages. But with benefits now clearly illimitable, interests had become interlocking; the

prosperity of one territory promoted that of the others. Brooklyn's lawyers did more business in New York courts than in their own, and its merchants' mansions were paid for with profits from their New York-based trade. The reverse was also true: the waterfront from Astoria to Bay Ridge was largely owned, developed, and used by New York merchants.

If all could swim together, they could sink together too. One common problem was the port's vulnerability to modern foreign fleets. Wherever the next war came from, Green warned, "New York must first answer at the muzzle of the gun." It was essential that it "be allowed to answer at the muzzle of another gun as heavy as that by which we shall be challenged." Local divisions only impeded the combined effort that alone could induce the national government to provide adequate defenses.

Access to the interior was another common predicament. Green reminded the citizenry that New York had become the nation's chief emporium not simply because it commanded foreign commerce but because it controlled routes to continental markets. Norfolk's was a better harbor, but it remained a summer watering place because it lacked inland connections. The Hudson seaport had long relied on its Erie edge, but that was no longer enough, as modern engineering skill whittled away mountainous impediments. New connections were essential—crucially, a bridge across the Hudson—and only a Greater New York could muster the resources to act without waiting for state or national governments.

Planning the city's physical development was as critical as arranging its commercial future. New York had to prepare for the immigrants who would clearly be flooding in for the foreseeable future, not just from overseas, but from the countryside. The percentage of the U.S. population living in cities had been rising steadily since 1790. Urbanization was rapidly speeding up as machine farming dispensed with field labor and city factories attracted former agricultural workers. If the process of incorporating this populace were left to pell-mell development, the results would be as inadequate to the needs of future generations as the colonial-era streets and alleys of lower Manhattan were to the present one.

Planning the whole area as a single unit—as Green had on a smaller scale while head of the Central Park Commission—would ensure better relations between centers and suburbs. Only if a Greater City controlled its outlying territories could it reserve them for, say, healthful parks, rather

than having them eaten up piecemeal. Only a Greater City could solve the “difficult question of taxation of non-residents that now exists,” with people on the periphery drawing sustenance from New York’s commerce but contributing little to its governance.

If taxpayers could easily cross city lines, so could rogues and criminals. Lawbreakers were truly “cosmopolitan,” Green noted, heedless of political boundaries, and disorderly persons often overwhelmed small towns. Only a unified metropolitan police command could check them.

There were other, more dangerous criminals on Green’s mind: he believed New York was in mortal peril from “lawless enterprise,” by which he meant modern combinations of capital—“leagues, guilds, combinations, federations, monopolies, pools and trusts.” For a man who’d spent much of his career helping Samuel Tilden arrange giant mergers—or perhaps precisely because of that experience—Andrew Haswell Green was extremely wary about the growth of corporations.

Their rise and impact was nowhere more evident than in cities, where “people live, move, and have their being by sufferance of the corporate power.” A citizen buys food from one, water from another, light from a third, and heat from a fourth, works on the road of a fifth, is paid in bills from a sixth, has his life insured by a seventh, and is buried in the grounds of an eighth. Green was not hostile to “modern forms of corporate contrivances” but insisted they “must be regulated and controlled by governmental intervention.”

The consequences of insufficient public purview were most apparent in the case of Green’s bete noire, railroad corporations—one he shared with merchants, populists, labor unions and social gospelers. While it was true that their lines made cities possible by allowing them to draw upon the resources and markets of a vast hinterland, they also “usurp[ed] control over approaches from the interior by land” and forced their way into the city, plowing through areas of their own choosing, laying tracks with no regard for street patterns, topography, or the public welfare. Their decisions, moreover, were laying down “lines of abnormal development or desolation,” deciding the character “of future growth or decay”; yet “if there are any who dispute their right, there are none to resist their might.”

The populace massed in cities represented a potentially countervailing power, but at a time when all private interests, “actuated by selfish motives,” were tending to consolidation, the only interests *not* combining were “our unselfish, thoughtless peoples, and their fatuous municipalities, which in broken form, carry on desultory and futile war against the organized forces of relentless and absentee capitalism.” For all his angry declamations about “popular rights” being subordinated to “corporate power,” however, Green had nothing much to say about actual people, and the issues like slums and sweatshops that agitated working people didn’t make it onto his agenda.

Green was hopeful about the future outcome of this war “between the corporate power and the power of the people” because he discerned evolutionary laws at work in the history of great cities, and of New York especially—laws that were the counterpart of those that had led to creation of the great corporations. Both developments were equally part of mankind’s great progression from barbarism to civilization.

But if Green was hopeful, he wasn’t smug. There were no guarantees that “the scheme of civilization, even in the hands of the Caucasian race, is beyond the hazards of deterioration.” Faulty government—and tribal (read: Tammany) divisions—jeopardized progress. New York unfortunately still had “our Sachems” who, clinging to traditions of barbaric times, “seek to preserve their clans and clanships.” Only through struggle could evolutionary destiny be attained, Green exhorted: “The encounter is one between the retreating forces of the tribal system and the coming forces of the cooperative system, between barbaric tradition and educated aspiration, to which there can be but one result, when the frontier lines of the Manhattan, the Montauks and the Raritans shall be obliterated, and New York, Brooklyn, Long Island City and Staten Island shall be one politically as they are already in every other relation.”

Finally, in the Rooseveltian spirit of the times, Green urged New York to recognize and grasp its imperial destiny. He realized there were carpers who believed his unification project was irrational, a lusting after magnitude for its own sake. But magnitude was already there, its real dimensions hidden but not erased by the sham separation into contending municipalities. New York had become, in fact, the second city in the world but was refusing to claim its title. It should do so, joyously. “Cities are the crowns, the signs,

the factors of empire,” Green proclaimed, and “the imperial city has won an honorable renown throughout the world which all her colonies may proudly inherit and which they cannot avoid accepting.” For all his upbeat assertions—and in the case of such impolitic references to Brooklyn’s secondary status, precisely because of them—Green’s cosmic vision was about to collide with local realities.

IMPERIUM OR COLONY?

Green and his Greater New York commissioners now proceeded to map out the precise dimensions of their proposed super-city. They included all New York State territories fronting on the harbor, added enough of Queens to embrace potential rival ports such as Jamaica and Little Neck bays, and threw in enough of Kings and Westchester counties to provide housing for uncounted future generations.

Next Green and his colleagues pushed for legislative authorization of a merger. This smoked out the opposition: upstate Republicans, who feared creating a monster metropolis; Tammany politicians, who shuddered at the thought of trying to organize such a vast territory; northern Manhattan and North Side (Bronx) developers, who dreaded a diversion of resources to Canarsie and Flatlands. But the most obdurate opponents came from Brooklyn itself. More precisely, they came from the old Anglo Protestant community centered in Brooklyn Heights.

These worthies had a peculiar relationship with Manhattan. They were well aware that Brooklyn was fundamentally dependent on New York: part bedroom suburb, part industrial hinterland, part agrarian supplier, part commercial backup. Yet they also maintained and treasured a separate identity, organized in large part around their difference from and presumed superiority to the metropolis. Protestant middle-class Brooklynites liked to think they embodied New England virtues, seasoned, mildly, with a dash of Dutch character. Theirs was a “city of homes and churches.” It was free from millionaires and the fashionably wicked ways of Fifth Avenue; free from the huddled immigrant masses and the squalor of Five Points or Hell’s Kitchen; free from the sordid pleasures of the Tenderloin and the Bowery; free from the corruptions of Tammany ward heelers; and free from the fast pace of scurrying big-city life. Yet, withal, it was not provincial. The town prided itself on its modern cultural appurtenances: parks, opera houses,

clubs, educational institutions, newspapers, a historical society, and, on the drawing boards, a museum that would surpass the Metropolitan. Keeping Manhattan at river's length would preserve this lovely way of life.

This was, however, a badly overstated case. It is true that the big rich stayed mainly in Manhattan, though the Pratts, Lows, and Pierreponts were no pikers. But the percentage of non-Protestants in each city, while different (52.7 percent in New York to 40 percent in Brooklyn), hardly justified such sweeping characterizations. The workingclass Irish around the Navy Yard, the Germans of Williamsburg, the Italians of Red Hook, the Jews of Brownsville, the African Americans of Fort Greene may have been out of sight (from the perspective of the Montauk Club or the Church of the Pilgrims) but they were hardly out of power, as repeated failures to impose a Dry Sunday attested.

There was, moreover, still another Brooklyn to contend with, the developmental powerhouse centered in the commercial section around City Hall. Montague Street's residential buildings had given way to banks, real estate offices, insurance companies, and law firms (like Gaynor's). New public buildings were everywhere—most strikingly a Hall of Records and a huge Romanesque Revival post office. Fulton Street by 1893 was crowded with hotels, warehouses, newspaper offices, theaters, and stores. Real estate values had zoomed to such levels that the downtown mercantile district was flowing farther from the piers, a development fostered by the traffic funneling in over the Brooklyn Bridge. A new satellite commercial district had emerged between City Hall and Flatbush Avenue, thick with Romanesque department stores, power stations, fire headquarters, libraries, and churches.

Yet the piers remained crucial to this booming Brooklyn—the thriving termini of great transatlantic fleets, vessels from South and Central America, domestic coastal freighters. In one week in 1886, the ships along Brooklyn's wharves and piers had carried a combined cargo of roughly 45,000 tons, compared to the mere 12,000 or so tons' worth tied up at New York during the same seven days. By 1897 an average of four thousand ships unloaded cargoes annually.

Manufacturing and the processing of agricultural commodities reached record levels. Half the sugar consumed in the United States was refined in Brooklyn; almost all the oil for the Atlantic seaboard was refined in

Williamsburg and Long Island City (along with plants in New Jersey). Bakeries and breweries drew from grain elevators with four times the capacity of Manhattan's, and its myriad ironworks and factories made Brooklyn the fourth largest industrial city in the country.

The economic expansion that had commenced with the opening of the Brooklyn Bridge had pulled in a huge workforce—the city's population had gone from 570,000 in 1880 to 800,000 by 1890, and in 1894 it was approaching 900,000. This demographic explosion had in turn generated a frenzied building boom. Construction of genteel housing was rampant from Brooklyn Heights to Fort Greene, to the newly (at last) fashionable Park Slope. Williamsburg was thriving, and Greenpoint's population had tripled (from twenty-three to seventy-five thousand) between 1880 and 1890. New Utrecht, only recently a farming town, had been transformed by the arrival of the Second Avenue Trolley, and thousands of houses were going up in real estate developments named Bensonhurst, Blythebourne, Bay Ridge Park, and Van Pelt Manor.

Most of the people presiding over this Brooklyn, and the spectacular run of prosperity it had been enjoying, craved consolidation because without it—they knew—it was all going to come to a halt. Roused to action by a William Gaynor speech at the Montauk Club, promoter merchants, bankers, real estate developers, large retailers, warehousers, lawyers, speculators, manufacturers, hotel proprietors, and streetcar company presidents came together, at a public meeting in the Real Estate Exchange, and organized the Brooklyn Consolidation League (BCL, 1893) to fight for ties with Manhattan. Launching a massive propaganda campaign, the BCL would issue two million pieces of literature, nearly all of them insisting Brooklynites face up to some unpleasant facts of life.

The Brooklyn Bridge, linchpin of the new prosperity, was a casualty of its own wild success. In 1890 over forty million people used it, roughly a quarter million each day. The thousands of Brooklynites descending on it at rush hour made it a human maelstrom. Men fought women and children for places in the cars, and the weaker were forced to walk over or take the ferry. Brooklyn and Williamsburg merchants clamored for additional East River bridges, but New York's commercial and political establishments were hostile; Mayor Grant, not atypically, worried in 1889 that the benefits of new construction would accrue wholly to Brooklynites.

The bridge was symbolic of other irrationalities. There was no through transport across it. Manhattan transit cars traversed the bridge, dumped their passengers, turned around and returned to Manhattan; and vice versa for Brooklyn trolleys. Neither the Metropolitan nor the BRT was prepared to establish the coherent, integrated, and vastly expanded rapid transit system that was patently key to keeping real estate values surging.

The transport dilemma, however, was as nothing compared to the water crisis. Brooklyn was about to run dry. In 1896 its water system was delivering ninety-four million gallons a day. Sober estimates suggested demand would reach that level within three years; some people were already experiencing shortages. Wells had been sunk down to suck water from layers of gravel 150 feet deep, and the city was pumping in fifty million gallons a day from the wells, ponds, and streams of Long Island, but the only remaining expedient—imperial expansion eastward—was about to be foreclosed.

In January 1896 Alfred Tredway White, then serving as commissioner of city works, urged Brooklyn to buy land in central Suffolk, suggesting that eastern Long Island's streams, and the watershed beneath its pine barrens, might well bring in an additional eighty million gallons a day. But Suffolk farmers, baymen, and homeowners had no intention of letting that happen, having witnessed the ecological impact of extractions to date. They had been forced to dig their own wells deeper and deeper to reach the sinking water table; oystermen's creeks were filling up with mud; ponds were turning into stagnant bogs teeming with the germs whose significance had recently become menacingly apparent. In June 1896, accordingly, Suffolk went to Albany and got a law preventing Brooklyn from drawing off its water without the approval of a majority of the county supervisors. This meant that for the foreseeable future, Brooklyn had reached its limit. Without a new source of supply, it could look forward to outbreaks of pestilence or an unquenchable conflagration that might lay half the city in ashes.

New York, meanwhile, was swimming in water. The original Croton Aqueduct's capacity of ninety million gallons a day had been exceeded by the early 1880s. Thanks to lobbying efforts by Andrew Haswell Green, among others, a New Croton Aqueduct had been authorized in 1883, begun in 1885, come partially on line in 1891, and fully completed in 1893. It had

already expanded carrying capacity to three hundred million gallons daily, and plans were afoot to expand the Croton watershed itself by building new dams and reservoirs. Even without these, the new system, when added to the former Croton's ninety million and the Bronx River's twenty million, could supply roughly four hundred million gallons per day, enough to support four million people, or a million more than the combined population of both Brooklyn and New York. Immediate relief via connecting pipes under the East River was therefore only a consolidation away—an argument deployed with equal cogency and force in Queens and Staten Island. Even the *Brooklyn Daily Eagle*, one of the staunchest Brooklyn *independista* organs, came out for a merger of the two cities' water supplies, though nothing else.

Water, the BCL noted, wasn't the only thing about to be in short supply. Development to date had required immense expenditures on roads, lighting, sewer mains, and the like, but Brooklyn would soon be unable to afford any of these. In 1884 New York State—in line with the post-Tweed fiscal clampdown engineered by, among others, the tight-fisted Andrew Haswell Green—had forbidden cities or counties from incurring a debt greater than 10 percent of the assessed value of its property. The postbridge expansion had been very costly for Brooklyn; apart from its layouts for basic infrastructure, it had assumed obligations for the \$1.2 million purchase of Wallabout Market from the U.S. government, and it was about to be burdened with the debts of several Kings County towns. As a result, Brooklyn was bumping up against its debt ceiling. Some banks had already rejected its bonds, the depression was not helping its revenues, and it seemed that rather than expanding city services Brooklyn would have to contract them, laying off clerks, teachers, policemen, firemen, and other employees. The gloomiest observers talked of impending bankruptcy.

The problem, most agreed, was Brooklyn's narrow revenue base, composed essentially of residential housing. In 1891 Brooklyn's population was fully half that of New York's, but it had only a fourth as much taxable property. New York was home to the big corporations—even railroads and steamship companies that did business in Brooklyn paid taxes in Manhattan—and it housed their offices too: in one year a single New York skyscraper paid more taxes than five hundred homes in Brooklyn.

In 1894, accordingly, New York was still fifty-five million dollars below its debt limit and it could sell its bonds for a negligible 3.9 percent. Brooklyn, meanwhile, had been forced to curtail its per capita spending, which was down to \$9.75 a head, compared to New York's \$22.46, while raising taxes steadily: Brooklynites paid an average of \$2.85 per hundred dollars of property to Manhattanites' \$1.82. To irate citizens who said the wealthy could well afford still higher taxes, the BCL counterargued that owners would invariably pass such increases on to renters, cutting demand, slowing building, and in the end mainly hurting construction workers, tradesmen, clerks, and shopgirls.

Consolidation, on the other hand, would allow construction of yet another crossriver pipeline, this one to Wall Street's capital pool. The resultant money flow would fertilize bridges, tunnels, waterworks, parks, roadways, rapid transit, and jobs. It would also lower taxes for property owners, with the slack picked up by underassessed Manhattanites—as lawyer Edward C. Graves pointed out in a winning BCL pamphlet called “How Taxes in Brooklyn Can Be Reduced One-Half.”

Finally, to those concerned with moral order and good government, the league argued that unification would not bring what one paper called the “horde of plug-ugly politicians that control New York” streaming across the bridge; rather, the combination of the virtuous of Brooklyn with the best men of Manhattan would overwhelm the politicians. Greater New York would be so immense that no Ring could possibly control it. And to those who feared the evils of Manhattan's slums and costs of welfare, Edward Bradford of the BCL wrote that there was no escaping such ills in any event. A man might “withhold charity, but he cannot dodge taxes swelled by crime and pauperism,” and every breeze was freighted with tenement-spawned germs.

THE GREAT DEBATE

In March 1893, William Gaynor led a two-hundred-man BCL delegation on board a charter train to Albany, where they presented all these weighty arguments to the legislature, only to see the measure killed by Brooklyn's representatives, who took their orders from Boss McLaughlin. At this the BCL plunged into politics, merging with that fall's Good Government, anti-McLaughlin, anti-McKane crusade. Both causes triumphed together, and

the new delegation of Brooklyn's representatives was solidly behind consolidation. When Andrew Haswell Green submitted a bill in February 1894 that called for submitting the issue to a nonbinding ye-or-nay referendum, it sailed through both houses and was signed into law by Governor Flower.

Now the Pros and Cons took their case to the electoral marketplace, and the battleground widened. In Manhattan, among the forces calling for a yes vote were the City Club, the Good Government Clubs, the leading commercial associations, and most major papers, including the *World*, *Herald*, *Sun*, *Tribune*, and the *Times*. Adding to consolidation's appeal among these wealthy and powerful men was the argument advanced by municipal efficiency advocates like Albert Shaw, who suggested—rather as Hamilton had a century earlier—that creating a metropolitan-scale government, with at-large elections, would allow “representatives of the best elements of business life” to edge out the politicians who excelled at ward-level combat. Shaw pointed to the new London County Council as a model for Greater New York, noting that there “were no saloon keepers or ward bosses in this London council.”

Consolidation was thus presented as a device for achieving the circumscription of democracy that the “best men” had been seeking ever since the Tilden Commission—led by Green's mentor back in 1877—had urged municipal power be vested in taxpayers only. Simon Sterne, a lawyer who had served on that body, was now in the forefront of consolidationist advocates, arguing that “we must stop organizing on the basis of arbitrary population and organize on the basis of interests, and let the elected few or the chosen few who are at the top of these interests ipso facto go into government.”

For the Manhattan masses, proponents stressed the benefits of lebensraum. Betteroff clerks, bookkeepers, salesmen, mechanics, and operatives, suggested the *Real Estate Record*, would be able to flee congested apartments to modest free-standing cottages available in Brooklyn at twenty-five dollars per month, or two-family houses at ten dollars per month. While this would not eradicate the slums, it would separate “the industrious and self-respecting poor” from “the less regenerate people by whom they are surrounded.”

This prospect also appealed to the development-minded in Brooklyn, but it terrified those who feared the unworthy might follow hard on the heels of the respectable. In part to soothe such fears, and win additional backing for a yes vote in the referendum, the city's new Republican-Fusion leadership embarked on its own campaign of urban imperialism. In 1894, to extend the sway of Good Government over the rest of Kings County, Brooklyn called for annexation of the seventeenth-century Dutch and English towns that still retained their independence. Gaining control over Gravesend's Coney was of particular concern, said the *Eagle*, for "the rescue of the island from barbarism, brigandage and bestiality requires that it be made part of the limits and jurisdiction of Brooklyn." Gravesend, Flatbush, and New Utrecht became wards of the city that year, and in 1896 the last remaining town, Flatlands, would be gathered in, making Greater Brooklyn coterminous with Kings County.

Given the Brooklyn Consolidation League's multidimensional and extremely well funded campaign, it appeared that even in Brooklyn the referendum was heading for easy passage. A BCL canvass of selected districts that spring showed 64 percent of voters in favor of consolidation.

Then came the Lexow investigation of corruption among Manhattan's police and politicians, and many Brooklynites backed away from the idea. Between May and November of 1894, as the exposes dragged on, hundreds of columns and cartoons appeared in the anticonsolidation press warning of the horrors that would flow from incorporation into a Tammany-run super-city. Republicans, hi particular, took fright at the prospect of having their new-minted victory overridden and being forced to relinquish power to Democratic crooks and connivers.

In November 1894 the referendum went to the voters.

In Manhattan, 96,938 voted for consolidation, 59,959 against. The Pro forces did best in upper- and middle-class districts and among native born and more assimilated German and Irish Americans; they did worst in poor districts and Tammany strongholds.

In Queens, over 60 percent of the electors voted for consolidation, with the greatest tallies being registered in the urbanized areas closest to Manhattan. Long Island City, in particular, was counting on reaping such benefits as a Blackwell's Island bridge, a bevy of new streets, and the

assumption by Manhattan of its substantial debt, product of both honest construction and blatant thievery. Such resistance as there was in Queens came from its sparsely settled periphery, though only Flushing failed to cast a majority in favor.

On Staten Island, the results were crisply clear: 5,531 for consolidation, 1,505 against.

In the eastern districts of the Bronx: Mount Vernon declined, by a large majority; Westchester said no, but only by one vote; Eastchester, Pelham, and the remainder of the territory said yes, convinced of amalgamation's benefits by the flurry of improvements that had begun in 1890, when the state transferred development oversight from the Department of Parks to a local group, the Department of Street Improvements of the Twenty-third and Twenty-fourth Wards. This body had gotten lots of streets paved and sewers built and had extended the grid throughout the area's irregular terrain. The new North Side Board of Trade (1894) pushed successfully for consolidation to keep the process in motion.

The referendum passed in Brooklyn too, but by less than the proverbial whisker. The final tally was 64,744 for merger and 64,467 against—a winning margin of 277 out of 129,211. Ironically, it was the newly conquered colonies of Gravesend and New Utrecht that, in voting heavily for consolidation, overcame the negative majority in Brooklyn's imperial center.

THE GREATER NEW YORK

Vol. 1. No. 1.

THE METROPOLIS OF AMERICA.

Price 5 Cents.

Father Knickerbocker:—"Welcome! Welcome! We will all dwell under one roof and be a very happy family."

A benevolent “Father Knickerbocker” welcomes “Brooklyn” to the family of Greater New York after the 1894 referendum. Another two years would pass, however, before opposition to consolidation on both sides of the East River had been finally defeated. (Brooklyn Historical Society)

The result emboldened opponents, who immediately after the election organized a League of Loyal Citizens, assembled their own roster of bankers, merchants, landlords, reformers, and clergymen, and launched a campaign to block consolidation at the state level. In pamphlets, circulars, leaflets, and a weekly bulletin called *Greater Brooklyn*, the Loyal Leaguers attacked Manhattan as a social and political failure (citing Jacob Riis to good effect); expressed doubts that a Manhattan-dominated Greater New York would ever dispense Brooklyn its fair share of anything; reiterated its objection to being swamped (as the Rev. Dr. Storrs of the Church of the Pilgrims put it) by a flow from Manhattan to Brooklyn of the “political sewage of Europe”; and expressed a desire not to “vote away our religion” and to remain “a New England and American city.”

The Loyalists appealed as well to traditions of local self-government and against a centralizing state, rather as had the Antifederalists a century earlier. They also sought to rouse middle-class ire against big developers on both sides of the East River. Thus *Eagle* editor St. Clair McKelway declared that in Brooklyn, every plain citizen was “the political peer of every capitalist or of every lot boomer,” that they preferred homes to tenements and houses to mansions, and that as residents of a “manly city” they would not “sell their rights or dodge their responsibilities for dirty money, no matter how high it be heaped.”

Finally, Loyalists appealed to municipal patriotism, wrapping themselves in the flag of Brooklyn, recalling with St. Clair McKelway the glorious days when “Washington’s army saved the Union’s life and afterward were able to beat the consolidation attempted against American liberty.” Seeking to tap popular levels of affection for Brooklyn, they denounced those consolidationist-minded gentlemen as being people who (in Storrs’s opinion) considered the city as a mere convenience on the order of a trolley car.

A disgusted Andrew Haswell Green dismissed the Loyalist campaign as a mix of “senile sentimentalism” and cynical manipulation by officeholders

who hoped to “stay the wheels of beneficent progress by a display of flags and banners, the din of brass bands, and other claptrap, to capture the thoughtless and unwary.” Whatever it was, it worked, and in 1895 the Loyalists, claiming a membership of fifty thousand, stormed Albany and succeeded in setting aside the referendum’s verdict. The merger movement—apart from a decision that year to bring the eastern Bronx on board—was dead.

ENDGAME

Then Boss Thomas Collier Platt revived it. As Republicans in 1894 had made a strong showing in all local municipalities, Platt had high hopes of capturing the first mayoralty of Greater New York. He believed he could enhance his party’s chances by combining Tammany-prone Manhattan with more Republican-friendly Brooklyn. Consolidation might also strengthen Platt’s hand against excessively independent Republican reformers like Mayors Strong and Schieren, who had sorely disappointed the boss in matters of patronage. Indeed he had received fewer political plums from the likes of Strong, Waring, and Roosevelt than he had from Tammany Hall. Perhaps, Platt reasoned, he might re-establish state-run commissions to seize control of police, fire, and public works departments from the reformers, at the very least until a supra-city charter took effect. Finally, by stepping forward as the Father of Greater New York, Platt could demonstrate to his big business backers how capable he was of energetic leadership on their behalf.

In 1896, accordingly, Platt rammed a bill through the legislature calling for consolidation of precisely the territories Green’s commission had proposed, to take effect as of January 1, 1898. The new law also empowered Republican Governor Levi Morton to appoint a nine-member panel to draft a new charter. As required by the state constitution, the bill was submitted to mayors of the affected cities.

Brooklyn’s Frederick Wurster vetoed it. So did Mayor Strong. Poised on the brink of victory, the Chamber of Commerce crowd allied to the Strong administration had gotten cold feet. Maybe the deal was *too* favorable to Brooklyn. Maybe Manhattan taxpayers would get stuck with the tab for improvements in the Bronx or be forced to shoulder debts racked up by profligate villages in Queens. The Union League Club, the City Club, the

Reform Club, the Association of the Bar, the Real Estate Exchange, the Board of Trade and Transportation—all counseled delay.

Platt shut his ears and pressed ahead relentlessly with repassage. The recalcitrant mayors were overridden on April 22. Now last-standers from both sides of the river descended on Governor Levi Morton, pleading for a veto. But Levi Morton very much wanted to be president, and Thomas Collier Platt was the only man who could obtain the nomination for him at the Republican convention upcoming in five weeks' time. Morton signed on May 11, 1896. Greater New York had arrived, though apart from its spatial boundaries, no one had the slightest idea of what it would look like.

Only now did the governor appoint a Charter Commission—ten Republicans and five Democrats. It included both notable consolidationists like Andrew Haswell Green (though he would fall sick and be unable to participate in the drafting process) and a strong contingent from Brooklyn (which Platt was anxious to placate). The members were virtually all lawyers, politicians, and men of property; there were no representatives of labor.

These gentlemen prepared an immense and rambling document that represented a series of compromises. It strengthened the mayor and the Board of Estimate and maintained the position of independently elected comptroller—features applauded by taxpayers and bondholders. It retired the Common Council, after more than two hundred years of service, and replaced it with a two-chambered municipal assembly. This body, together with the five newly instituted borough governments (complete with elected borough presidents) was intended to satisfy the desire of Brooklyn's Loyal Leaguers for decentralized, local self-government. It also gave Boss Platt four potential footholds outside Manhattan should Tammany manage to hold on to New York County.

The charter commissioners pleased home rulers by shifting the right to grant street railway franchises from the state legislature to the municipal assembly and permitting the city to impose conditions on owners of shoreline property. Developers and planners appreciated creation of a Board of Public Improvements, with modest powers to coordinate public works throughout the city. Housing reformers applauded the charter's call for a commission to establish a uniform building code for all five boroughs. And charity reformers were delighted when Commissioner Seth Low wrote in a

provision that explicitly banned all outdoor relief (apart for subsidies to the blind)—including the spirit-sapping free handouts of fuel supplies they had been trying to outlaw for over a decade. The charter would thus force Richmond and Queens to terminate their relief programs, and Manhattan to cut off coal.

Though New York Good Government forces assailed the final product, Brooklynites professed general satisfaction (or exhaustion), and with Croker's support Platt got the nine-hundred-page document safely through the legislature by March 23, without, he boasted, "the crossing of a 't' or the dotting of an 'i.'" After one last stubborn mayoral veto from William Strong had been overcome, the Charter of Greater New York was presented to Governor Frank Black for his signature, which he affixed on May 5, 1897.

By the rainy evening of December 31, 1897, therefore, the city was poised for transformation.

TOWARD THE TWENTIETH CENTURY

Marching through soggy streets, the parade of revelers poured into City Hall Park, brilliantly illuminated by five hundred magnesium lights. Bands and choral societies regaled them (while competing for silver cups, with Tony Pastor and his fellow judges straining to hear over the wind and din). As midnight approached, the rain turned to damp snow. When Trinity's bells chimed the hour, Hearst's coordinated cacophony rolled over the assembled merrymakers. A battery of field guns near the post office boomed out a hundred-gun salute. Red and green flares and aerial bombs soared aloft. The city's tugs and ferries shrieked their whistles. And as the throng (led by German singing societies) joined in singing "Auld Lang Syne," Mayor James Phelan of San Francisco pressed a button that sent a charge of electricity hurtling across the continent to unfurl Greater New York's new blue and white flag atop City Hall. At the same moment, the glum crowd assembled outside what was now merely Brooklyn's Borough Hall fell silent, marking their city's passing.

A colossus had been born. Over three million strong, over three hundred square miles huge, larger than Paris, gaining on London, New York was ready to face the twentieth century. But when the fireworks faded away and

the crowds dispersed, what—apart from an end to free coal for the poor—would consolidation mean for the city and its people?

Consolidation, which would take many forms other than the merely municipal, would be key to the new century's first decades. As we will see, J. P. Morgan and his colleagues would press relentlessly ahead with the process, begun in the 1880s, of consolidating rival companies into giant corporations. A great merger movement from 1897 to 1904 would forge the modern American capitalist economy, of which New York City would be the headquarters, its ever taller skyscrapers affording the new order both shelter and symbolic expression.

Greater New York would undertake mammoth building projects, creating the infrastructure of bridges, subways, railways, water tunnels, and power lines that would make consolidation a reality, not just a constitutional artifact. Its populace, swollen by massive immigration, would move out along the new rapid transit lines, filling out Brooklyn, creating an instant city in the Bronx.

Culture wars would continue, with the upper and middle classes consolidating their museums and libraries and housing them in grand Roman Imperial temples, for their own enjoyment and to elevate the retrograde. The city's commercial culture would also expand, however, giving rise to such novelties as cabarets, nickelodeons, and Times Square, all of which genteel reformers would vainly attempt to rein in.

Businessmen and professionals would continue their efforts, intermittently successful, to wrest control of municipal politics from Tammany Hall, while middle-class reformers would struggle to refurbish the civic order by consolidating the agencies of public health, law enforcement, housing, welfare, and schooling.

A new generation of socialists, unionists, feminists, artists, African-American activists, and settlement workers would come together: to criticize corporate power; to protest and improve working conditions in shops and factories; to suffer from and fight against unemployment, poverty, and high rents; to organize a series of mammoth general strikes that would force Tammany into taking up a progressive agenda; to promote a radical assault against the ramparts of genteel culture; to win suffrage for

women; and, after a race riot in 1900, to generate a civil rights coalition that would contest Jim Crow at home and throughout the country.

New York's financiers and industrialists, finally, would steadily expand New York's imperial outreach, their efforts reaching an apotheosis during the First World War, when the United States was transformed from a debtor to a creditor nation and its leading metropolis began to replace London as the fulcrum of the global economy, emerging as heir presumptive to the tide of Capital of the World.

INTRODUCTION TO SOURCES AND SUGGESTIONS FOR FURTHER READING

A synthesizer, looking back, sees a thief's shadow. Our book draws upon thousands of studies made by myriad specialists who in the last generation have rewritten the city's history. It is they who produced the strands of scholarship that we have woven into a narrative.

In the resource notes that follow, we have space to offer only the most truncated acknowledgment of the immense debt we owe those upon whose research and insights we have relied. The alphabetized author and date listings are intended only to suggest those works we found most valuable in sorting our way through the subject of each particular section. This approach does not allow us to differentiate between those interpretations we support and follow and those which we disagree with but nevertheless consider provocative or informative. Under these circumstances, it is more important than usual to insist that those we cite are to be held blameless for our infelicities of analysis and errors of fact. As to the latter, we acknowledge that this work, by its very scope, will inevitably contain mistakes and misstatements, and we invite correction and comment (bouquets as well as brickbats). Readers can email us at gotham@oup-usa.org.

Finally, a note, for those who might be interested, about the nature of our scholarly collaboration. It began a quarter century ago, when we jointly wrote, in 1972, a lengthy essay on the American Revolution. In the early 1980s, we embarked on this study of New York City. The end product is the result not only of years of discussion and debate but of decades of mutual support and sustenance without which this daunting enterprise would never have come to fruition. Our method of work involved one of us doing the reading, researching, structuring, and writing of a chapter, then passing it to the other, whose commentary, critique, and at times additional research, new writing, or rewriting, would inform the second, third, or however many drafts it took until both partners were basically satisfied with the result. The

authors' contributions of intellect and energy are therefore so interlaced that each page bears the mark of their affiliation.

Practical considerations, however, demanded a rough division of labor and attained expertise. Accordingly, Burrows took primary responsibility for producing drafts of chapters 1-26—essentially the seventeenth, eighteenth, and early nineteenth centuries. Wallace did the same for the Introduction and for the remainder of the nineteenth-century material (embracing chapters 27-69). The story of the twentieth century, which swelled to such dimension that it required a volume of its own, has been and will be tackled by MW alone.

We consulted several indispensable reference works so often that it would be tiresome to mention them in each of the section notes that follow. They are Jackson, *Encyclopedia of New York* (1995), Kouwenhoven, *Columbia Historical Portrait of New York* (1953), and Stokes, *Iconography of Manhattan* (1915-28). For the city's history in the seventeenth and eighteenth centuries, we likewise made heavy and repeated use of the primary materials collected by Fernow (1887, 1897, 1902-7, 1907), Lincoln (1894), Hastings and Corwin (1901-16), O'Callaghan, 1849, 1853-87, 1868), Osgood (1905), and Van Laer (1974).

Acknowledgments

One measure of how long this project has gone on is that so many of the people we most wanted to read the finished product are no longer around to do so.

For EGB that list includes my grandmother, Eleanor Gary Lemon, as well as my grandfathers, Prof. Millar Burrows of Yale University and the Rev. William Philip Lemon, scholars as well as men of faith, each of whom had set aside a place on his shelves for such a book as *Gotham*. I am sorry that Gerard Mutsaers, a Dutchman who took such pride in escorting friends around the Netherlands, did not live long enough to read about the role of his native country in the city's early history.

Among the family members whose absence I (MW) most regret are my mother, Margaret Wallace (I miss her joyful curiosity and unflagging support), my father, Aaron Wallace (I miss his wit and political empathy), and my uncle, Sol Isaacs (who, until his death at ninety-five, was still sharing laser-sharp memories of life as a New York garment presser and union man). Among mentors and friends I wish were here to share the satisfaction are Richard Hofstadter, a man who asked big questions and answered them with artistry and authority; Joe Murphy, former CUNY chancellor, crusader for working class educational opportunity and a strong supporter of this book; Herb Gutman, Raphael Samuel, Warren Susman, and Edward Thompson—model activist intellectuals all; and Tony Lukas, David Varas, and Elliot Willensky, who were looking forward to *Gotham* but departed way before their time.

Happily, there are vast numbers still around to share our delight and receive our thanks, beginning with those closest to us, those who've endured The Book, helped us to survive it, and—mainly—shared and enriched our lives.

There is no one to whom I (EGB) am more beholden for firm anchorage and steady encouragement than my wife, Pat Adamski. Our life together began more than two decades ago with a rollicking late-night jaunt up Fifth Avenue, and it was during one of our many subsequent urban reconnaissances that I decided to launch a course at Brooklyn College on

the history of the city. I am humbled by the thought that even while building her own distinguished career as a legal scholar and educator, she also found the time and energy to bear with me during the years that followed, as *Gotham* struggled toward completion. There are no words to encompass my wonder at the loving patience of our children, Matt and Kate, who have waited their entire lives for “daddy’s book” to be done, unaware of how many times their presence revived my spirits and kept me going until it was, in fact, done. My parents, E. G. Burrows and Gwenyth L. Burrows, not only brought me up to value good books and good writing but seemed to understand why *Gotham* required so long to finish. I am much obliged as well to Eric McKittrick and Richard Hofstadter, my teachers at Columbia University, whose guidance, praise, and friendship made all the difference to a young graduate student.

My (MW) wife, Hope Cooke—wise counsellor, historical compeer, voluptuous playmate (for the full encomium see my *Mickey Mouse and Other Essays on American Memory*)—shared my love of the city and pleasure in exploring its past and present. Hope also provided me with a new family—Hope Leezum, Palden, and Kesang, and now our grandchildren, Khendum and Diki. My sister, Penny, offered sibling love and helped keep me laughing. Anne Leiner was my wise, caring, and transformative counsellor. Marion Skelly and Lauree Wise were skillful healers when mind-and-body flagged. My old friend Bob Padgug has been waiting for this book as long as he can remember. Finally, some long overdue thanks to a trio of teachers—Eric McKittrick, who among other lessons taught me I didn’t yet know how to write; Jim Shenton, who through example and exhortation got me into the history business; and Walter Metzger, who one day, without realizing it, broached the concept of a life project.

It’s quite insufficient to thank Frances Goldin for being our “agent.” She is as much a “principal” in this project as we are—third paddle in our canoe. Frances is, to be sure, a superb literary representative, but her personal steadfastness and politically principled support were as important as her skillfulness. Without her deep caring, astonishing patience, and resolute determination this book would not likely have seen the light of day.

Many mavens helped us negotiate the churning currents of the big city’s publishing industry. Vincent Virga, novelist, historian, and photo editor par

excellence, was our crucial pillar and counsellor during many critical moments. The late Jerry Kaplan understood immediately what we wanted to do and opened the first of what would be many doors. Andre Schiffrin and Peter Dimock provided wise tactical and strategic advice. David Klein, Robert Youdelman, Leon Friedman, Bardyl Tirana, and Kellis Parker helped steer us through some legal rapids. Eddie Ellis offered the fruits of his encyclopedic labor and much of his library. Marty Duberman pointed us to Frances, and Sydelle Kramer, Frances's associate, pointed out a productive path at a fork in the road. We thank too those in the publishing world who had faith in us at an earlier stage—Jim Silberman, Dominick Anfuso, Michael Denny, Aaron Asher, Philip Pochoda, Arthur Samuelson—and we thank those who didn't, for spurring us to greater effort.

All praise to Laura Brown, publisher at Oxford University Press, for having the courage and enthusiasm to tackle such a massive project and for doing so with such gusto and expertise. Sheldon Meyer, a richly experienced editor of the old school (long may it prosper), helped us slim down our manuscript from preposterous to merely gargantuan proportions. The artistry and commitment of India Cooper added luster to the copyediting profession. Susan Day, Brandon Trissler, Adam Bohannon, Pat Burns, Joellyn Ausanka, Mary Ellen Curley, and Russell Perreault formed the team that took *Gotham* from hard drive to hard copy.

Both of us work in a great if currently beleaguered institution, the City University of New York, and we would like to thank our respective colleges and colleagues for their many years of support.

At Brooklyn College, EGB has had the good fortune to share an office with an old friend, Don Gerardi, whose encyclopedic knowledge of the city's religious history proved indispensable on more than one occasion. Teo Ruiz and Tim Gura, eminent teachers as well as deep-dyed New Yorkers, have been generous and loyal comrades, off campus and on. During his year as a visiting professor at Brooklyn, Peter Charles Hoffer read the first half of the manuscript with uncommon diligence and kept reminding me to let go of it. As a graduate student, Sara Gronim untangled some puzzling aspects of Kieft's war; as a new colleague, she has willingly shared her work on Jane Colden and the study of science in eighteenth-century New York. Thanks, too, to Christoph Kimmich, former chairman of the History Department, Provost of the College, and now interim

Chancellor of the University, who has been a sturdy advocate of this and other scholarly projects. A tip of the hat, finally, to the many hundreds of students who have joined me over the years in History 44 (“Burrows on the Boroughs,” as one of them called it): your boundless curiosity about the city’s past and your steadfast belief in its future should be an example to us all.

I must also pay my respects to a small coterie of Gothamites who, though not at Brooklyn College, vetted great blocs of manuscript and responded with such good grace to my appeals for additional assistance that they might as well have occupied offices just down the hall: Charles Gehring of the New Netherland Project in Albany; Milton Klein, prolific doyen of early New York historians; Howard Rock, who also freely shared his collection of New York pictures; and David Voorhees, editor of *de Halve Maen* and the Jacob Leisler Papers.

At MW’s John Jay College of Criminal Justice, President Gerald Lynch has been a staunch backer of this enterprise and over the years has put the resources of the College behind it. Former Vice President John Collins was long a beamish supporter. In recent years Provost Basil Wilson, an ardent sponsor of intellectual enterprise at the College, arranged crucial time off for writing. My heartfelt thanks to them and to former Dean John Cammett and once-and-future Chairman Isidore Silver (for bringing me to Jay a quarter century ago) and to colleagues past and present who buoyed me up over the long years of Gothamizing: Bob Banowicz, Paul Brenner, Blanche Wiesen Cook, Eli Faber, Dan Gasman, Mary Gibson, Carol Groneman, Ann Lane, Jacob Marini, Gerry Markowitz, Joe O’Brien, Bill Preston, Jay Sexter, and Howard Umansky, among many others. I want in particular to salute my students, who in their extraordinary diversity and their determined pursuit of education (often under the most difficult of circumstances) truly represent what’s best about New York. In teaching them, I learned a great deal about our city and discovered new and better ways to tell its story.

We have been jointly and severally fortunate in receiving financial assistance, which afforded us that most precious of resources, time. In this project’s long foreground, MW was assisted by a 1976 Victor Rabinowitz Foundation grant, and in 1980 the authors together received a Research Fellowship from the National Institute for Humanities— another

beleaguered and worthy public institution. In *Gotham's* latter days, the Wolfe Institute for the Humanities at Brooklyn College gave EGB a year off in 1992–93; the N.E.H. gave MW a College Teaching Fellowship in 1993, and the American Council of Learned Societies awarded him a fellowship in 1994. The authors and Oxford University Press would like to thank Furthermore . . . , the publication program of The J.M. Kaplan Fund, which helped leaven our texty loaf with a grant to enhance its graphics component. A special thank-you to Joan Davidson of Furthermore. . . .

Libraries! Treasuries of source material and constellations of knowledgeable and helpful souls. Wayne Furman, who runs the Allen Room—the New York Public Library and Frederick Lewis Allen's superlative gift to authors—provided us with our indispensable home away from homes and a direct pipeline into the NYPL's magnificent collections. Mark Piel, spirited director of an even more venerable local institution, the New York Society Library (1754), repeatedly extended himself, and his material, on our behalf. The New-York Historical Society—yet another threatened scholarly institution and indeed one that nearly foundered during the course of this project—offered invaluable resources. So did the Brooklyn Historical Society and the Museum of the City of New York. EGB is grateful to the staff of the Brooklyn College Library, past and present, who have so often extended themselves to retrieve obscure materials. MW offers special thanks to the Lloyd Sealy Library at John Jay College, whose superb staff over the years—including Marilyn Lutzker, Eileen Rowland, Bob Grappone, Tony Simpson, Bonnie Nelson, Kathy Halloran, Janice Dunham, Marvie Brooks—assembled a deep and rich collection of metropolitania.

The authors have also drawn upon scores of specialized libraries and of history museums as well. Among them are the Abigail Adams Smith Museum, Bronx County Historical Society, Bronx Museum of the Arts, Ellis Island Immigration Museum, Engineering Societies Library, Fort Wadsworth, General Society of Mechanics and Tradesmen Library, Harbor Defense Museum, Historic Richmond Town, Jewish Museum, King Manor Museum, Lower East Side Tenement Museum, Masonic Hall Library and Museum, Merchants' House Museum, Morris-Jumel Mansion, Museum of Chinese in America, New York Transit Museum, New York City Fire Museum, Police Academy Museum, Queens Historical Society, Schomburg

Center for Research in Black Culture, Skyscraper Museum, South Street Seaport, Valentine-Varian House, and the Weeksville Society.

We have been helped in accumulating primary and secondary source materials by David Paskin, Kesang Namgyal, Marcia Caro, Jacqueline Talamas, and Nuria Agullo. Thanks also to Marilyn Atkins-Nelson and Ana Argueta.

Our greatest debt—apart from that we owe the legions of scholars upon whose work we have drawn—is to those friends, colleagues, and family members who took out often inordinate amounts of time to read portions of this opus as it issued from our computers. In the beginning there was Roy Rosenzweig, himself a scholar of the city and a preeminent practitioner of public history. Roy read reams of our earliest prose, offered first-rate criticism, and gave encouragement and enthusiasm when it counted most. Roy was followed by many others who contributed advice, information, and many other kinds of support. We've been helped by outstanding academics from a wide variety of fields and by tour guides, history buffs, political activists, architects, lawyers, engineers, journalists, union leaders, and historic preservationists, among many others.

With regrets for lacking space to give them adequate personal recognition, we salute and thank Jean-Christophe Agnew, David Amram, Jeanie Attie, David Birnbaum, Dan Bluestone, Pat Bonomi, Steve Brier, Josh Brown, Ric Burns, Paul Byard, Barbara Cohen, Page Cowley, Jacques D'Amboise, Bruce Davidson, Susan Davis, Gloria Deak, Vicki DeGrazia, Kanak Mani Dixit, Joe Doyle, Edward Robb Ellis, Jason Epstein, Liz Fee, Joe Fried, Deborah Gardner, Marvin Gelfand, Eugene Genovese, Brendan Gill, David Gordon, Christopher Gray, Carolyn Grimstead, Herb Gutman, John Halpern, Erich Hartmann, Susan Henderson, Ken Jackson, Brooks Jones, Alfred Kazin, Derek Keene, Thomas Kessner, Barbara Kirshenblatt-Gimblett, Jeff Kroessler, Richard Lieberman, Tony Lukas, Harry Magdoff, Pedro Mateos, David Melville, Mike Merrill, Simon Middleton, Jane Miliken, Sandy Miller, John Mulligan, Charles Musser, Palden Namgyal, David Nasaw, De Nederlandsche Bank, Peter Neill, Paul Otto, Chimie Pemba, T. T. Pemba, Mike Pertschuk, the members of the Radical History Review Collective, Paul Resnik, Dick Roberts, Dan Schiller, Dinitia Smith, Deborah Solbert, Peter Solbert, Paul Sweezey, Bill Tabb, Walter Thabit,

Danny Walkowitz, Margaret Wallace, Suzanne Wasserman, Jon Wiener, Sean Wilentz, Bill Wise, Alan Wolfe, and Sally Yarmolinsky.

In the home stretch, supplementing Sheldon Meyer's sharp-eyed rereadings, three people plowed through the entire manuscript. Eric Foner brought his wide-ranging historical expertise to bear and provided a sweeping and reassuring assessment. Betsy Blackmar, a penetrating scholar of the city, gave the manuscript a brilliant, cranky, loving, and tough-minded going over—exactly what it needed. For Hope Cooke, herself a virtuoso metropolitan historian (see her *Seeing New York*), this was but the latest journey through these pages, having read every preceding draft, and her final insights were as invaluable as all her earlier ones.

*The term has gone in and out of popular favor, having great currency in one decade, falling into desuetude the next. It owes its most recent revival to the 1989 movie *Batman* and its sequels, themselves a reincarnation of the late 1930s comic books. When New Yorkers Bob Kane and Bill Finger first created the caped crusader, they were going to call Batman's hometown "Civic City." That seemed a bit dull, however, and Finger "tried Capital City, then Coast City. Then, I flipped through the phone book and spotted the name Gotham Jewelers and said, 'That's it,' Gotham City. We didn't call it New York because we wanted anybody in any city to identify with it. Of course, Gotham is another name for New York." Actually, as a later *Batman* editor perspicaciously noted, Gotham is New York's noirish side—"Manhattan below Fourteenth Street at 3 A.M., November 28 in a cold year"—whereas Superman's Metropolis presents New York's cheerier face, "Manhattan between Fourteenth and One Hundred and Tenth Streets on the brightest, sunniest July day of the year."

1. More than 150 years later, the Lenapes gave a Pennsylvania missionary their version of what happened when the first white men landed on Manhattan: they sighted a “large canoe or house” moving across the water and decided that it belonged to the Supreme Being, “the great Manitto,” who then appeared before them dressed entirely in red. After a preliminary exchange of courtesies, he offered them a toast and they all got happily drunk—whence the site came to be known as Mannahattanink, “the island or place of general intoxication.” If authentic, this almost certainly alludes to events that occurred before Hudson arrived. Hudson and his mate, who kept a fairly full record of their activities, made no mention of landing on Manhattan. It doesn’t appear, either, that the Lenapes he encountered were especially surprised to see him.

2. The *Tyger* burned and sank on the Hudson shore of Manhattan near what would now be (thanks to subsequent landfill) the intersection of Greenwich and Dey streets, due east of the World Trade Center's North Tower. In 1916 workmen excavating the site for the IRT subway uncovered the ship's prow and keel. Portions were sawed off and are now preserved by the Museum of the City of New York; the rest is still there, twenty feet below street level.

3. The charter divided the company into five provincial chambers, one of which was in Amsterdam proper (and cost a hefty six thousand guilders to join). A nineteen-member central committee, consisting of delegates from the provincial chambers and the States-General, supervised the company's business, but day-to-day matters were delegated to particular provincial chambers. The administration of New Netherland and Curacao, for example, always belonged to the Amsterdam Chamber. Similarly, the colony's spiritual affairs were entrusted to the Classis of Amsterdam, an association of churches that had the exclusive right to examine and license dominies, or ministers.

4. Jasper Danckaerts later remarked that native American peoples knew nothing of theft or greed prior to the European invasion “because *zeewant*, which they all treasure and now serves as their money, didn’t exist previously but was only their decoration as beads are for children.” According to the Hiawatha legend, wampum was invented by the Iroquois.

1. In 1649 white residents criticized the company for enslaving the offspring of free Christian mothers. Taken aback, the company moderated its claim to occasional labor and noted defensively that only three children were then in service.

1. Note too that Dutch names were patronymic but not patrilineal, meaning that the family lineages typical of England and English colonies didn't exist in New Netherland. Thus, if Roeloff Jans had a daughter named Volckje, she would be known as Volckje Roeloffse (or Roeloffsen). If she married Jan van Hoesen, she could keep the name Roeloffsen or take the name Jansen (also spelled Jansz or Janse); it wouldn't be unusual to find her listed both ways in the records.

1. Van der Donck later retired to his estate overlooking Spuyten Duyvil, where he set himself up as *ajonkheer*, or squire—whence the present town of Yonkers. His death in 1655 coincided with the publication of his famously lyrical *Description of the New Netherlands*.

2. When the missionaries Jaspas Danckaerts and Peter Sluyter visited New Utrecht in 1679, they found that seven or eight of the original Nayack families, fewer than two dozen people in all, had returned to their former lands to scratch out a “poor, miserable” existence. Cortelyou rented them “a small corner” of what was now his property for “twenty bushels of maize yearly”—an illustration of how quickly the balance had swung against native peoples.

1. A Jacob Street, also said to have been named for Leisler, no longer exists. Gouverneur Street, Gouverneur Lane, and Gouverneur Slip were all named after Abraham Gouverneur, a leading Leislerian who later married Milborne's widow, Mary Leisler. Hester Street was named after another Leisler daughter, while Nicholas Bayard is remembered in Bayard Street. After World War I a bronze tablet commemorating Leisler was placed on a boulder in City Hall Park, only to be banished a decade or so later by Parks Commissioner Robert Moses.

1. The only rival of the King's Arms was the Two-Mile or Bowery Village Tavern operated by John Clapp, sometime clerk of the Assembly. Situated two miles north of town on the Bowery Road, roughly on the present site of Astor Place, the Two-Mile Tavern was billed as a place where "Gentlemen travellers. . . may have very good Entertainment for themselves and Horses." It also became the resort of choice for refreshments during a genteel outing into the country. Dr. Bullivant, who was driven out to Clapp's by Governor Fletcher himself, testified that it offered "good Cyder & mead."

1. The African Burial Ground was part of land deeded by Governor Colve in 1673, during the brief Dutch reconquest of the city, to Cornelius van Borsum, in recognition of the services of his wife, Sara Roeloff. A daughter of Anneke Jans, Roeloff had acted as an interpreter in negotiations between Dutch officials and the Esopus Indians. Subsequent disputes over the title, lasting well into the eighteenth century, probably delayed the development that would eventually cause the burial ground to be filled in. The site was rediscovered in 1991, during excavations in the block bordered by Broadway, Duane, Elk, and Reade streets. The remains of four hundred men, women, and children were removed to Howard University for further study.

1. The Heights of Guan are visible today in the high ground that begins in Bay Ridge and runs west to east through Green-Wood Cemetery, Prospect Park, Eastern Parkway, Evergreen Cemetery, and Forest Park in Queens. The Gowanus Pass is now 37th Street between Green-Wood and Sunset Park, while the Flatbush Pass is the East Drive of Prospect Park. Bedford Pass was where Bedford Avenue now meets Eastern Parkway. Jamaica Pass lies at the junction of Jamaica Avenue and Evergreen Cemetery.

1. Local place names continue to reflect the outcome of the struggle over Trinity's holdings. When the first streets were cut through the King's Farm in February 1790, four were named after conservative Anglicans who helped beat back the radical offensive: Duane, Jay, Harison, Provoost. Two streets honored former Tory clergymen: North Moore Street (for the Rev. Benjamin Moore) and Beach Street (for the Rev. Abraham Beach, who with Moore was appointed an assistant minister of Trinity after Provoost became rector in 1784).

2. The final indignity may well have been the survival of so many street names originally chosen by De Lancey when he staked out the area for development prior to the Revolution. These include, besides Delancey Street itself, Rivington Street (named for the sometime Tory printer), James and Oliver streets (named for the onetime governor's sons, both ardent Tories), Stanton Street (named after George Stanton, the De Lanceys' agent), and Grand Street (which was to have run through a Great Square).

1. In 1785 and again in 1792 Congress established the decimal “dollar” as the basic monetary unit of the United States. New York State officially switched to the dollar in 1797, and the Common Council of New York City seems to have followed suit shortly thereafter. Merchants and shopkeepers, however, continued to use pounds, shillings, and pence alongside “federal money” well into the nineteenth century, at an exchange rate of eight shillings per dollar (thus city shoppers were accustomed to seeing the price of a book, for example, expressed as either 3/ or 37^{1/2} cents.) Foreign coins remained legal tender in the United States until 1857.

2. Or maybe not. There are no eyewitness accounts of this famous incident other than Jefferson's—two versions of which came to light many years after the fact. Hamilton and Madison left no mention of any such deal, and the linkage of assumption and residence is at least open to question: for many members of Congress, as indeed for Hamilton himself, the really tough issue was whether to fund at 6 percent or 4 percent, not where the capital would be. Everybody, on the other hand, knew that some kind of understanding had resolved the crisis—if not the one described by Jefferson—and that getting the capital out of New York was somehow a part of it.

1. Rowson's plot allegedly draws upon the affair between a certain Charlotte Stanley and John Montresor, the author's cousin and a Royal Engineer stationed in New York during the Revolution (he is still remembered for an exquisitely detailed 1775 map of the city). During the rebuilding of Trinity Church in the mid-1840s, Charlotte Stanley's tombstone was somehow reinscribed "Charlotte Temple." As such, it became a shrine for the novel's many readers and one of New York's premier tourist attractions. Year after year weeping pilgrims strewed the site with flowers and other testimonials to their devotion. They were still doing so, according to one report, as late as 1905. Local historians, meanwhile, battled furiously over the exact site of Charlotte's death, though everyone agreed it must have been in the vicinity of Chatham Square, perhaps on the lower Bowery. The crumbling Walton House, supposedly where Rowson's pregnant heroine made a dramatic final appeal for help, gained a similar renown. When it burned in 1853, hundreds of distraught townsfolk gathered at the scene to mourn the loss.

1. Yet even in these terms, New York's new spatial arrangements were hardly flawless. Though longitudinal traffic would perforce be heavy on a long and narrow island, the grid provided two and a half times more latitudinal streets than it did north-south avenues. The absence of major diagonals—apart from Broadway, which the commissioners had originally intended to eliminate—forced cartmen and coaches to zig and zag around squared-off blocks, colliding at intersections that invited gridlock. Nor, as was customary, had the commissioners provided service alleys through the center of blocks: this maximized salable land but impeded access to it.

1. Cheap docks kept wharfage rates down, enhancing the port's competitiveness. They wore out quickly, however, and their narrow little basins, clogged with filth, became breeding grounds for disease. They were thus a far cry from the great enclosed stone piers of London—the West India Docks (1800-1806), London Docks (1800—5), East India Docks (1803-6), and the sumptuous new St. Katharine's Dock (1823) beside the Tower of London, which allowed direct unloading from ship to warehouse—all of which were linked directly with England's inland waterways via. the new Regent's Canal (1812-20). But such enterprises were fantastically expensive—the London Dock Company alone spent 1.2 million pounds—and technically unnecessary in New York. The tides of the Thames (and Liverpool's Mersey) rose and fell twenty feet. The vast dock enclosures were designed to accept vessels at high water and then, by closing their locks, keep them afloat when the tide receded. New York's rivers and estuaries fluctuated only four or five feet. This allowed the city to make do with less costly, less sightly, and less healthy versions.

1. Not everyone in the black community got behind this effort. Douglass later recalled being told by another escapee that “New York was full of slaves returning from the watering places of the North, that the colored people were not to be trusted; that there were hired men of my own color who would betray me for a few dollars; that there were hired men on the lookout for fugitives; that I ought not to think of going upon the wharves or into any colored boarding house, for all such places were closely watched.” Ruggles hid Douglass in his home.

1. Whigs also passed a law in 1838 that threw open the right of incorporation—including all its privileges and immunities—to anyone who could meet minimal requirements. In this Whig magnates had the support of Loco Foco radicals, who were convinced that they were ending the monopolization of banking and attendant legislative corruption by special interests. In fact, they had opened the door to concentrations of capital and accumulations of corporate power far beyond anything they were capable of imagining.

2. One of those who left town after the first disappointment was a freed slave named Isabella Van Wagenen, who over the previous decade had been a housekeeper and cobeliever of James Latourette, a Manhattan fur merchant who had broken with the Methodist Church to lead a New York group of Wesleyan perfectionists. After that, she became a member of the Kingdom of the Prophet Matthias, an anti-Finneyite cult. In June 1843, having renamed herself Sojourner Truth, she commenced an itinerant ministry, traveling first to the City of Brooklyn, then out into Long Island, where Millerite camp meetings proved receptive to female preaching, and then up to New England, where she began her abolitionist career.

1. In 1845 Thaddeus Hyatt patented a unique lighting system that neatly complemented Bogardus's creation. Thick glass discs set within iron grilles were placed in the sidewalk in front of a warehouse, letting natural light into the basement and avoiding the need for gas lighting and its attendant fumes.

2. Artificially carbonated soda water, made by Noyes Darling and first served at the Tontine Coffee House in 1809, became a serious industry in the thirties, with the arrival of Englishman John Matthews, whose factory at First Avenue and 26th Street became the nation's leading plant for production of soda water, bottles, glasses, and designs for soda fountains. Natural effervescent mineral water, discovered in upstate New York in the 1780s, was also popular; it was known as seltzer, after Sellers, a village in Prussia associated with the drink.

3. Singer introduced a family machine in 1856. Home sales were sluggish at first, until Singer offered them at half price to ministers' wives and to sewing societies connected with churches, after which sales to "respectable" women picked up. Singer also sold abroad, arguably becoming the first multinational corporation in the process. Sales agencies were installed in Paris in 1855 and Rio in 1858, and remittances from abroad helped tide the company over during domestic recessions. By 1861 Singer was doing more business in Europe than in the United States.

1. Observers often presented “crowds” as socially undifferentiated organisms, seldom providing a breakdown of their class composition. One exception was a journalist who in 1845 noted that the Broadway “crowd” changed markedly with the time of day. In the early morning clerks, mechanics, and laborers went by. Then masses of merchants and children made their way to work and school. Forenoon brought out people of leisure, many of them ladies or strangers, to promenade the shops. At noon mechanics paraded by on their way to dinner, as did the merchants at three, and so forth. The streets were never crowded in the same way.

2. Such vigorous assertions unsettled even Nature's chief apostle, Ralph Waldo Emerson. When in 1842 Emerson made a lecture swing down to the city, he inveighed against "this world of material & ephemeral interest" but confessed that maybe it was only his own "poorness of spirit" that kept him from the city. Perhaps in his next "transmigration," Emerson speculated, he would "choose New York."

3. This hyperinstability was compounded, Joel Ross noted, by the hypermobility so dramatically evident each May Day. “It is so customary to ‘move’ on this day, that it would seem that many change their residences just to be in the *fashion*” but whatever their motives, the result was that New Yorkers “are more like travellers who stop on their journey for the night, and start on the next morning, with little attachment to their lodging-place, and well nigh forget it by the next sun.”

4. The interracial heart of darkness was Almack's, "the assembly-room of the Five-point fashionables," wittily named after an exclusive London club. Despite Dickens's mordant rhetoric, the smartly dressed and cordial African-American proprietor, Pete Williams, arranged a "regular break-down" for Dickens's delectation, featuring the brilliant dancing of Master Juba. Not one to miss an opportunity, after *American Notes* came out, Williams renamed his now notorious venue "Dickens' Place."

1. New York workingmen's egalitarian imperialism was surpassed by editors, politicians, and businessmen who smelled profits from speculation, trade, and investments. Moses Beach, editor of the *Sun*, howled for annexation of Mexico in order to provide access to silver mines, banking rights in Mexico City, new commercial markets, and a fresh field for canal and railroad construction. Indeed New York City boasted the greatest concentration of those who insisted it was America's Manifest Destiny to seize the rest of the continent. "The extension of the republic to the uttermost extremities of this vast division of the earth," Bennett argued in the *Herald*, "must now be seen as natural, justifiable and safe as the extension of New York to the Harlem River."

1. The anti-Catholic animus hampered even Brace's more radical efforts. Having explored the Italian section of the Five Points and discovered that poor Italian parents were indenturing their children to "Padrones" who exploited them as organ grinders, bootblacks, and flower-sellers, the CAS tried to break the traffic and started a night school for Italian children in 1855. But parents kept their children away in fear they would be converted to Protestantism.

1. Working-class spokespeople also protested corruption. Mike Walsh excoriated the “wirepullers” who rigged nominating meetings to choose corrupt hacks who would hand out city or state contracts to their buddies. He denounced Captain Rynders as an unprincipled hireling. He decried the rising costs of campaign spending, which meant, in effect, that no one could get elected who wasn’t either already rich or who “basely sells himself to corrupt and wealthy men.” This fury stemmed from the larger conviction that the supposed Democrats were betraying the larger interests of working people under the guise of pseudo-populist rhetoric. The fact was, he insisted, that “no man can be a good political democrat without he’s a good social democrat.” But Walsh himself was incorporated into the machine and sent off to Congress, and he was snared by the party’s coalition with southern interests (and his scorn for northern hypocrisy about wage-labor) into a defense of slavery. Finally he became a political pawn; his movement collapsed by 1850, and Walsh himself came to a wretched end in 1859.

1. Some New Yorkers let go of their profitable southern links with great reluctance. Trading in southern state bonds at the Merchants' Exchange terminated only at the end of 1861. Gazaway Lamar, acting on a secret commission from the Confederacy, was able to buy a thousand muskets in Manhattan, and though the ship sending them south was seized by the Metropolitan Police—Mayor Wood apologized but noted his lack of authority over the state-run body—it was released when the governor of Georgia threatened to seize New York vessels in Savannah harbor. Some clothiers surreptitiously sewed southern uniforms, even after Sumter, and agent Lamar got the National Bank Note Company to print up Confederate bonds and ship them to Alabama. Still, these were exceptions.

1. The legislature did intervene in harbor affairs after an 1871 study by the U.S. Coastal Survey revealed that refuse dumping was fast filling up key harbor channels. Albany prohibited casting of wastes into the Hudson and East rivers, Upper New York Bay, and parts of Raritan Bay, though authorizing dumping in Lower New York Bay south of the Narrows, if okayed by the new slate office of shore inspector. They also shut down the official garbage dump site established at Oyster Island in 1857 and shifted it to the southeastern side of Staten Island, though by 1877 much refuse was also being used as fill in Bayonne, New Jersey, and Newtown Creek.

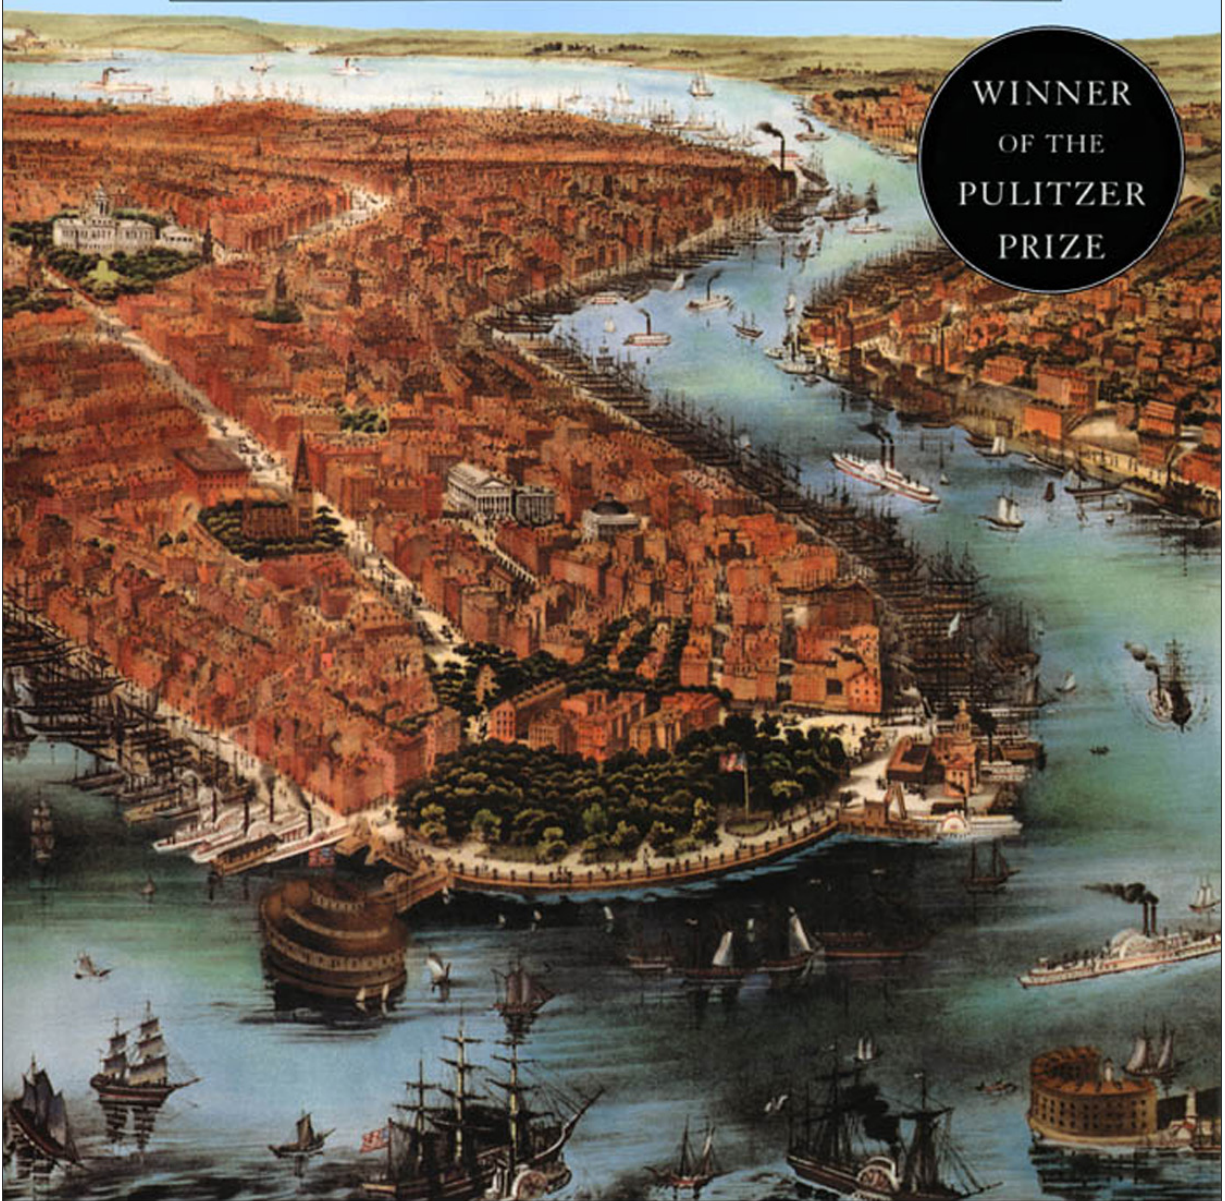

1. The continuing ecclesiastical hostility to the theater was famously manifested at the end of the 1860s when an old actor by the name of George Holland died, and the rector of a fashionable Fifth Avenue church declined to hold a funeral for him. He did, however, recommend asking at “the little church around the corner,” which obliged the bereaved thespian community. That establishment, the Church of the Transfiguration at 29th Street just east of Fifth, retains to this day its identification with the city’s theatrical profession.

1. On November 14, 1890, Ely left New York City aiming to travel around the world in fewer than the eighty days it had taken Jules Verne's fictional Phileas Fogg. After a brief stop at Amiens to interview Monsieur Verne (who said she'd never make it), she dashed eastward while the *World* watched breathlessly, chronicling her race against time, whipping up excitement, and running "Your Nellie Bly Guessing Match," in which readers were urged to estimate the number of days and hours she would take. The winning number proved to be seventy-two. When Bly arrived back in the city, thousands cheered and cannons were fired, as if her circumnavigation, like the opening of the Erie Canal or the Atlantic Cable, warranted a full-fledged Festival of Connection, which in a way it did. Pulitzer transformed Bly's hoisting of the *World's* circulation figures *itself into* news. He began publishing daily circulation statements, transforming business exigency into popular drama, while simultaneously underscoring the *World's* reputation as an advertising vehicle.
